
Every solver iteration, dt = 0.01, 32 periods, 320,000 steps per trial (no decimation)
D = 0.02, whole record: 320,000 steps, 160 per pixel
D = 0.02, one drive period: 10,000 steps
D = 0.02, a single hop: 300 steps
D = 0.12, whole record: 320,000 steps, 160 per pixel
D = 0.12, one drive period: 10,000 steps
D = 0.12, a single hop: 300 steps
D = 1.0, whole record: 320,000 steps, 160 per pixel
D = 1.0, one drive period: 10,000 steps
D = 1.0, a single hop: 300 steps
x, too little noise
x, near optimal
x, too much noise
time (model units)
every step
kept by decimate = 10
